## Highlights

**Relative effects of seagrass canopy, wave coupling and bed mobility on Lagrangian transport in a shallow lagoon**

Cicero Martins Jr., Mauro De Marchis, Giuseppe Ciraolo, Carmelo Nasello, Antonino Maltese

- Seagrass canopy drag raises drifter skill by 0.12, five times the effect of waves
- Only the gauge inside the vegetated basin separates the canopy treatments
- An uncalibrated mobile bed mimics the canopy at an implausible sediment load
- A uniform initial column inflates the canopy effect from 0.12 to 0.19
- Canopy parameters come from published measurement, none fitted to observations
